# Subsurface Scattering & Complex Material Properties

---

Last Time?

- What is a Pixel?
- Aliasing
- Fourier Analysis
- Sampling & Reconstruction
- Mip maps

not a box!

$f(x)s(x)$ x

$F(u)*S(u)$ u

Final Projects

- Teams of 2 highly encouraged
- Individuals or teams > 2 must talk to me first
- Continue to discuss on LMS

- Proposals due next week (Thursday 4/8)
  - Proposed project summary
  - At least 3 related papers (read & summarized)
  - Description of series of test cases
  - Timeline & initial task assignment

Today

- Measuring BRDFs
- 3D Digitizing & Scattering
- Complex Material Properties
- Importance of Participating Media
- BSSRDFs
- Other Complex Materials

An Assessment of Laser Range Measurement
of Marble Surfaces, Godin et al, 2001.

Questions?

Reading for Friday 4/2:

- "Radiance Caching for Participating Media", Jarosz, Donner, Zwicker, & Jensen, 2008.

## Today

- Measuring BRDFs
- 3D Digitizing & Scattering
- Complex Material Properties
- Importance of Participating Media
- BSSRDFs
- Other Complex Materials

Anisotropic BRDFs

- Surfaces with strongly oriented microgeometry
- Examples:
  - brushed metals, hair, fur, cloth, velvet

Source: Westin et.al 92

What makes a Rainbow?

- Refraction is wavelength-dependent
  - Refraction increases as the wavelength of light decreases
  - violet and blue experience more bending than orange and red
- Usually ignored in graphics
- Rainbow is caused by
 refraction + internal reflection + refraction
Pink Floyd, *The Dark Side of the Moon*

From "Color and Light in Nature"
by Lynch and Livingstone

Amount of Reflection

- Traditional ray tracing (hack)
  - Constant **reflectionColor**
- More realistic:
  - Fresnel reflection term (more reflection at grazing angle)
  - Schlick's approximation: $R(\theta)=R_0+(1-R_0)(1-\cos\theta)^5$

metal   Dielectric (glass)

Dusty Surfaces & Retro-Reflection

- Viewed perpendicular to the surface, there is little scattering off dust
- At grazing angles, there is increased scattering with the dust making the surface appear brighter
- Similarly, the earth viewed from space appears brighter near the edges, because of increased scattering of the atmosphere.

LIGHT direction

Dark Areas

Illuminated Areas
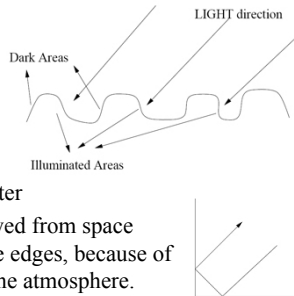

Figure 5: Showing retroreflection from a very rough surface (left). Only areas with normals close to the light direction are well lit, so there is a strong retroreflective peak. On the right, we see a corner reflector (the inside corner of 3 planes is the 3D analog) which produces the same effect.

Light Rays in a Dusty Room

BRDF vs. BSSRDF

Images from "A Practical Model for Subsurface Light Transport"
Jensen, Marschner, Levoy, & Hanrahan SIGGRAPH 2001

Sampling a BSSRDF

(a)   (b)

Figure 7: (a) Sampling a BRDF (traditional sampling), (b) sampling a BSSRDF (the sample points are distributed both over the surface as well as the light).

Images from "A Practical Model for Subsurface Light Transport"
Jensen, Marschner, Levoy, & Hanrahan SIGGRAPH 2001

"A Practical Model for Subsurface Light Transport",
Jensen, Marschner, Levoy, & Hanrahan, SIGGRAPH 2001

Subsurface Scattering Variables

Name	Symbol	Units	Description
Scattering Coeff.	σ_s	$(\text{length})^{-1}$	Probability of scattering per unit length
Absorption Coeff.	σ_a	$(\text{length})^{-1}$	Probability of absorbtion per unit length
Phase Function	$p(x,\vec{\omega}',\vec{\omega})$		Angular distribution of scattering
Extinction Coeff.	σ_t	$(\text{length})^{-1}$	$\sigma_a + \sigma_s$
(Scattering) Albedo	A		σ_s/σ_t
Optical Depth	$\tau(0,d)$		$\int_0^d \sigma_t dx$
Transmittance	$t(0,d)$		$e^{-\tau(0,d)}$

- Albedo: first approximation of BRDF,
  % of light reflected off the surface
  - When the albedo = 1, no absorption occurs and light is only transmitted or scattered. This is an ok approximation for snow or clouds.

BSSRDF Measurement

Images from "A Practical Model for
Subsurface Light Transport"
Jensen, Marschner, Levoy, & Hanrahan
SIGGRAPH 2001

Single Scattering

Figure 4: Single scattering occurs only when the refracted incoming and outgoing rays intersect, and is computed as an integral over path length s along the refracted outgoing ray.

Images from "A Practical Model for Subsurface Light Transport"
Jensen, Marschner, Levoy, & Hanrahan SIGGRAPH 2001
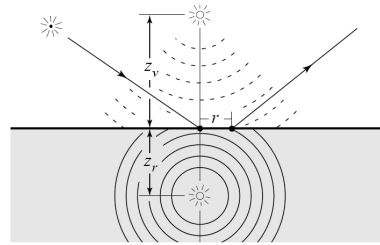

Dipole Approx. for Diffuse Scattering

Figure 3: An incoming ray is transformed into a dipole source for the diffusion approximation.

Measuring Hair

Black hair   **Blond hair**   **Synthetic (wig)**

"Light Scattering from Human Hair Fibers"
Marschner et al., SIGGRAPH 2003

Rendering Hair

Old Method	New Method	Photo

Figure 12: A comparison of Kajiya and Kay's model (left) under a single point source, our proposed model (center) with the same lighting, and the hair from the photograph in Figure 11 (removed from context to simplify the comparison). The Kajiya model's diffuse term results in a flat appearance, while the secondary highlight in our model correctly captures the colored shading of the real hair.

"Light Scattering from Human Hair Fibers"
Marschner et al., SIGGRAPH 2003

Reading for Tuesday 3/17:
