WebGL & The Grasping Interface

Hans Vorsteveeld
RPI CS Robotics Lab
April 19 2011
WebGL

- Provides hardware accelerated 3D rendering in the web browser
- Developed and managed by Khronos Group
- Based on OpenGL ES 2.0
- Applications written with JavaScript
- Supported in Chrome, Firefox 4
- Many frameworks exist already
Three.js

- 3D JavaScript engine, using WebGL
- Simple to use
- Built in lighting, primitive objects, shaders
- Allows Scene hierarchy
- Allows object parent/child relationships
- [https://github.com/mrdoob/three.js/](https://github.com/mrdoob/three.js/)
Three.js Demonstrations

- Revolving Box
- Planetary System
- Bouncing Balls
Grasping Interface

- grasp.robotics.cs.rpi.edu
- Provides access to all data in Experiments database
- Provides a 3D visualization of the experiments
- Planning to add graphs of certain data
