

# Cloth Simulation & Collisions

CSCI-6962 Advanced Computer Graphics Cutler

# Last Time?

CSCI-6962 Advanced Computer Graphics Cutler

# Today

- **Mass Spring Systems**
  - String
  - Hair
  - Cloth
- Stretch/Stiffness
- Discretization
- Collisions
- Implicit Integration

CSCI-6962 Advanced Computer Graphics Cutler

# How would you simulate a string?

- Each particle is linked to two particles
- Forces try to keep the distance between particles constant
- What force?

CSCI-6962 Advanced Computer Graphics Cutler

# Spring forces

- Force in the direction of the spring and proportional to difference with rest length

$$F(P_i, P_j) = K(L_0 - \|P_i - P_j\|) \frac{P_i - P_j}{\|P_i - P_j\|}$$

- K is the stiffness of the spring
  - When K gets bigger, the spring really wants to keep its rest length

# How would you simulate a string?

- Springs link the particles
- Springs try to keep their rest lengths and preserve the length of the string
- Problems?
  - Stretch, actual length will be greater than rest length
  - Numerical oscillation

## How would you simulate hair?

- Similar to string...
- Deformation forces proportional to the angle between segments

CSCI-6962 Advanced Computer Graphics Cutler

## Mass-spring

- Interaction between particles
- Create a network of spring forces that link pairs of particles
- Used for string, hair, cloth

Baraff, Witkin, Kass

## Questions?

CSCI-6962 Advanced Computer Graphics Cutler

## Today

- Mass Spring Systems
  - String
  - Hair
  - **Cloth**
- Stretch/Stiffness
- Discretization
- Collisions
- Implicit Integration

CSCI-6962 Advanced Computer Graphics Cutler

## Three types of forces

- Structural forces
  - Try to enforce invariant properties of the system
  - E.g. force the distance between two particles to be constant
  - Ideally, these should be constraints, not forces
- Internal Deformation forces
  - E.g. a string deforms, a spring board tries to remain flat
- External forces
  - Gravity, etc.

CSCI-6962 Advanced Computer Graphics Cutler

## Cloth modeled with Mass-Spring

- Network of masses and springs
- Structural springs:
  - link  $(i, j)$  &  $(i+1, j)$  and  $(i, j)$  &  $(i, j+1)$
- Shear springs
  - link  $(i, j)$  &  $(i+1, j+1)$
- Flexion springs
  - link  $(i, j)$  &  $(i+2, j)$  and  $(i, j)$  &  $(i, j+2)$

## Cloth

Graphics Cutler

## External forces

- Gravity  $G_m$
- Viscous damping  $C_v$
- Wind, etc.

CSCI-6962 Advanced Computer Graphics Cutler

## Cloth simulation

- Then, the all trick is to set the stiffness of all springs to get realistic motion!
- Remember that forces depend on other particles (coupled system)
- But it is sparse (only neighbors)

CSCI-6962 Advanced Computer Graphics Cutler

## Contact forces

- Hanging curtain:
  - 2 contact points stay fixed
- What does it mean?
  - Sum of the forces is zero
- How so?
  - Because those point undergo an external force that balances the system
- What is the force at the contact?
  - Depends on all other forces in the system
  - Gravity, wind, etc.

CSCI-6962 Advanced Computer Graphics Cutler

## Contact forces

- How can we compute the external contact force?
  - Inverse dynamics!
  - Sum all other forces applied to point
  - Take negative
- Do we really need to compute this force?
  - Not really, just ignore the other forces applied to this point!

CSCI-6962 Advanced Computer Graphics Cutler

## Questions?

CSCI-6962 Advanced Computer Graphics Cutler

## Today

- Mass Spring Systems
  - String
  - Hair
  - Cloth
- **Stretch/Stiffness**
- **Discretization**
- Collisions
- Implicit Integration

CSCI-6962 Advanced Computer Graphics Cutler

## Implementing Cloth

- Excessive deformation:  
the springs are not stiff enough

Initial position

After 200 iterations

CSCI-6962 Advanced Computer Graphics Cutler

## The Stiffness Issue

- Cloth is only a bit elastic, shouldn't stretch so much
- We use springs where we really want a *constraint*
  - What relative stiffness do we want for the the different springs in the network?
- Inverse relationship between stiffness &  $\Delta t$
- Many numerical solutions
  - reduce  $\Delta t$
  - use constraints
  - implicit integration
  - ...

CSCI-6962 Advanced Computer Graphics Cutler

## One Solution

- Constrain length to increase by less than 10%

Simple mass-spring system

Improved solution  
(see Provat Graphics Interface 1995)

CSCI-6962 Advanced Computer Graphics Cutler

## The Discretization Problem

- What happens if we discretize our cloth more finely, or with a different mesh structure?
- Do we get the same behavior?
- Usually not! It takes a lot of effort to design a scheme that does not depend on the discretization.
