## Local vs. Global Illumination & Radiosity

An early application of radiative heat transfer in stables.

#### Red's Dream, Pixar, 1987

#### Announcement: Quiz 1

- On Submitty
  - Tuesday (March 9th), during class (2:30-4:20pm)
  - Short answer & pencil/digital sketching/upload
  - Let me know ASAP if you have a network outage or other personal situation
- Closed book / no internet / no collaboration
  - one double-sided 8.5"x11" sheet of notes allowed
- Practice Problems (2017 quiz) on the calendar
- Coverage:
  - Lecture and assigned readings thru Lecture 10
  - When there was a choice of papers: you are responsible for having read one paper per lecture,
  - Worksheets thru Lecture 10
  - Homeworks 0, 1, & 2

#### Today

- Paper for Today: Distributed Ray Tracing
- Local Illumination
- Why is Global Illumination Important?
- Radiosity Matrix
- Calculating the Form Factors
- Advanced Radiosity
- Worksheet

#### Reading for Today

"Distributed Ray Tracing", Cook, Porter, & Carpenter, SIGGRAPH 1984.

#### **Shadows & Light Sources**

- Paper for Today: Distributed Ray Tracing
- Local Illumination
  - BRDF
  - Ideal Diffuse Reflectance
  - Ideal Specular Reflectance
  - The Phong Model
- Why is Global Illumination Important?
- Radiosity Matrix
- Calculating the Form Factors
- Advanced Radiosity
- Worksheet

BRDF

- Ratio of light coming from one direction that gets reflected in another direction
- Bidirectional Reflectance Distribution Function

-4D

- $-R(\theta_i,\phi_i;\theta_o,\phi_o)$
- Note: BRDF
   for *isotropic* materials is 3D

#### **Non-Ideal Reflectors**

- Real materials tend to be *neither* ideal diffuse *nor* ideal reflective
- Highlight is blurry, looks glossy

# Non-Ideal Reflectors Most light reflects in the ideal reflected direction Microscopic surface variations will reflect light just slightly offset How much light is reflected?

#### **Ambient Illumination**

- In a typical room, everything receives at least a little bit of light
- Ambient illumination represents the reflection of all indirect illumination

$$L(\omega_r) = k_a$$
  
• This is a total hack!

#### Reading for Today (optional)

 "Measuring and Modeling Anisotropic Reflection", Ward, SIGGRAPH 1992

#### Radiosity vs. Ray Tracing

Original sculpture by John Ferren lit by daylight from behind.

Ray traced image. A standard ray tracer cannot simulate the interreflection of light between diffuse surfaces.

Image rendered with radiosity. Note the color bleeding effects.

#### The Cornell Box

 Careful calibration and measurement allows for comparison between physical scene & simulation

#### Radiosity vs. Ray Tracing

- Ray tracing is an *image-space* algorithm
   If the camera is moved, we have to start over
- Radiosity is computed in object-space
  - View-independent (just don't move the light)
  - Can pre-compute complex lighting to allow interactive walkthroughs

- Paper for Today: Distributed Ray Tracing
- Local Illumination
- Why is Global Illumination Important?
- Radiosity Matrix
- Calculating the Form Factors
- Advanced Radiosity
- Worksheet

#### Radiosity Overview

- Surfaces are assumed to be perfectly Lambertian (diffuse)
  - reflect incident light in all directions with equal intensity
- The scene is divided into a set of small areas, or patches.
- The radiosity, B<sub>i</sub>, of patch *i* is the total rate of energy leaving a surface. The radiosity over a patch is constant.
- Units for radiosity: Watts / steradian \* meter<sup>2</sup>

### Discrete Radiosity Equation

Discretize the scene into n patches, over which the radiosity is constant

#### Radiosity in Matrix Form

$$B_i = E_i + \rho_i \sum_{j=1}^n F_{ij} B_j$$

*n* simultaneous equations with *n* unknown  $B_i$  values can be written in matrix form:

A solution yields a single radiosity value  $B_i$  for each patch in the environment, a view-independent solution.

#### Interpolating Vertex Radiosities

- B<sub>i</sub> radiosity values are constant over the extent of a patch.
- How are they mapped to the vertex radiosities (intensities) needed by the renderer?
  - Average the radiosities of patches that contribute to the vertex
  - Vertices on the edge of a surface are assigned values extrapolation

#### Questions?

Factory simulation. 30,000 patches. Program of Computer Graphics, Cornell University.

- Calculating the Form Factors
- Advanced Radiosity
- Worksheet

#### Form Factor Determination

The Nusselt analog: the form factor of a patch is equivalent to the fraction of the unit circle that is formed by taking the projection of the patch onto the hemisphere surface and projecting it down onto the circle.

#### Hemicube Algorithm

- A hemicube is constructed around the center of each patch
- Faces of the hemicube are divided into "pixels"
- Each patch is projected (rasterized) onto the faces of the hemicube
- Each pixel stores its pre-computed form factor The form factor for a particular patch is just the sum of the pixels it overlaps
- Patch occlusions are handled similar to z-buffer rasterization

#### Form Factor from Ray Casting

Cast *n* rays between the two patches

Compute visibility (what fraction of rays do not hit an occluder)
Integrate the point-to-point form factor

Permits the computation of the patch-to-patch form factor, as opposed to point-to-patch

#### **Questions?**

- Advanced Radiosity
  - Progressive Radiosity
  - Adaptive Subdivision
  - Discontinuity Meshing
  - Hierarchical Radiosity
- Worksheet

#### Increasing the Accuracy of the Solution

- Image quality is a function of patch size
- Compute a solution on a uniform initial mesh, then refine the mesh in areas that exceed some error tolerance:
  - shadow boundaries
  - other areas with a high radiosity gradient

#### **Optional Reading for Next Time:**

"Fast and Accurate Hierarchical Radiosity Using Global Visibility" Durand, Drettakis, & Puech 1999

#### **Hierarchical Radiosity**

- · Group elements when the light exchange is not important
  - Breaks the quadratic complexity
  - Control non trivial, memory cost

#### Practical Problems with Radiosity

- Meshing
  - memory
  - robustness
- Form factors – computation
- Diffuse limitation

Cow-cow form factor?

 extension to specular takes too much memory
