1. Lectures

During the first weeks we will have live lectures via WebEx during the scheduled class time on Mondays and Thursdays 12-1:50pm. You should have all received an invitation in your RPI email for the recurring WebEx Meetings. We will transition to live in-person lectures in SAGE 3713, as soon as possible (at the time of writing, Jan 8th, we are scheduled to transition to the classroom on Jan 21st, although this may change as the epidemiological situation evolves).

Program Analysis is very interactive and I would like to keep it this way during our time online. Please ask questions. I will be asking questions during class as well.

Lecture slides will be available before class at the course website https://www.cs.rpi.edu/~milanova/csci4450/schedule.htm. Last year’s lecture recordings are available on Mediasite: https://mediasite.mms.rpi.edu/Mediasite5/Channel/program_analysis. A lot of the material overlaps, however, there will be new material (more compiler stuff, Ghidra, and binary analysis) and recordings may not be available.

2. Office Hours

Office hours will be online throughout the term in my “office” https://rensselaer.webex.com/meet/milana2, on Mondays and Thursdays 4-5pm.

Use the Submitty discussion forum! We will answer individual questions and give detailed feedback on homework assignments.

3. Quizzes

We will proceed with our quizzes as scheduled. They will take about 20-25 minutes of class, usually in the beginning of class, and I encourage you to work in teams, whether online or in person.

If online, I will post the new quiz as a Submitty gradable/homework at about class start time, 12pm and it will be due at about 1:50pm on the same day. Upload your answer as a PDF (questions are typically multiple choice).

If in person, I will print the quiz and distribute it in class.
