Soft Computing Homework 9: Work on your Project (7 points)
Bill Cheetham, Kai Goebel
Due: Tuesday November 4th

Resubmit your project proposal from homework 7 with the addition of the following:

Describe progress and changes from your previous project description. (2 point)

Provide answers to any questions/comments that were written in your Homework 7 project description (if any). (1 point)

Identify the largest risks that could keep you from finishing your project. (1 point)

Explain what are you doing to address these risks? (1 point)

Describe two (2) use cases for your project. (2 points)

A use case describes the following
1) a specific set of input to your system,
2) any preprocessing that is done on that input,
3) the processing your systems does on the input (in detail), and
4) the exact output that is generated by your system

The use case can either be an example run through your tool if it is working or one done by hand if it is not.
