Objective

"Stereological Techniques for Solid Textures"
Jagnow, Dorsey, & Rushmeier, SIGGRAPH 2004

Given a 2D slice through an aggregate material,
create a 3D volume with a comparable appearance.

Slide from Rob Jagnow

Recovering Sphere Distributions

N_A = Profile density
(number of circles per unit area)

N_V = Particle density
(number of spheres per unit volume)

\bar{H} = Mean caliper particle diameter

*The fundamental relationship
of stereology:*

$$N_A = \bar{H} N_V$$

Recovering Sphere Distributions

Slide from Rob Jagnow

Profile Statistics

Segment input image to obtain profile densities N_A .

Input

Segmentation

Bin profiles according to their area, $\sqrt{A/A_{\max}}$

Slide from Rob Jagnow

Recovering Color

Select mean particle colors from segmented regions in the input image

Slide from Rob Jagnow

Recovering Noise

How can we replicate the noisy appearance of the input?

The noise residual is less structured and responds well to Heeger & Bergen's method

Synthesized Residual
