Course Description

This course is an introduction to computer science emphasizing computational thinking, problem-solving, small-scale programming, and applications. This includes basic programming constructs such as data, variables, functions, conditionals, loops, lists, files, sets and dictionaries. It also includes, especially in the latter part of the semester, object-oriented programming and problem solving. Applications will include Web-centric computing, image processing, numerical computing, and graphics. Previous programming experience is neither required nor expected.

Course Text(s)

We will use the University of Toronto book, Practical Programming: An Introduction to Computer Science Using Python by Campbell, Gries, and Montojo. This is available in both print and electronic versions. While purchase of this book is not mandatory, we will follow its order and coverage fairly closely. The examples we use in class will largely complement rather than repeat the ones in the book.

Very important: You must have at least the second edition of this text because it works with Python 3 which we will use in this class. The first edition of this book and earlier class materials (before Fall 2016) use an earlier version of Python which is not compatible with Python 3.

Course Goals / Objectives

The main objective of this class is to teach computational problem solving using Python. Python has a simple syntax, a powerful set of programming primitives, and a rich set of libraries, making it ideal for classroom learning and for rapid prototyping.

Student Learning Outcomes

1. Demonstrate proficiency in the purpose and behavior of basic programming constructs
2. Design algorithms and programs to solve small-scale computational programs
3. Write, test, and debug small-scale programs
4. Demonstrate an understanding of the wide-spread application of computational thinking to real-world problems

Course Assessment Measures

Assessment	Number	Learning Outcome #s
Exam	3	1, 2, 3
Homework	7	1, 2, 3, 4
Lab Report	11	1, 2, 3, 4
Lecture Exercises	22	3

Grading Criteria

Lecture Exercises: 4%, Labs: 13%, Homework assignments: 33%, Tests: 30%, Final Exam: 20%

The cutoff for grades are as follows:

A : 93-100
A-: 90-92
B+: 87-89
B : 83-86

B-: 80-82
C+: 77-79
C : 73-76
C-: 70-72
D+: 67-69
D : 60-66
F : 0-59

Cutoffs may end up lower than this but will not be raised from here. Thus, for example, if you earn a 93 average you are assured of earning an A, regardless of what other students earn.

Lecture Exercises: Even though attendance in class is not required, submission of solutions to lecture exercises is required. Lectures will be conducted in-person as live sessions. In addition, we have pre-recorded versions of each lecture available at <https://www.youtube.com/c/DatascienceConcepts> (Playlist : Computer Science 1).

Each live lecture session will be divided into two (or three) segments of 25-35 minutes each. At the end of each segment you will be given a few short practice problems to work on to help you get started in your understanding and application of the ideas discussed. You will be given time during lecture to work on these problems, and students who work efficiently will have time to finish. You are encouraged to work with your friends and fellow students; the goal is to build your own understanding.

Students will have 24 hours after the start of lecture to submit solutions electronically. Solutions will be graded completely automatically. We will practice with the Lecture 2 exercises in Lab 1 so these exercises will not be due until then. The 24-hour submission requirement will be imposed starting with Lecture 6.

There will be 24 lecture exercises each equally weighted, and each student's best 19 will be counted towards their final grade. Since this gives each student a chance to miss up to three sets of exercises without affecting their grade, we will not be accepting any excuses for missing lecture exercises.

Labs: There will be 12 labs (numbered from 0 to 11), each one equally weighted. Labs will be designed so that students who prepare in advance and work diligently can earn full credit. In addition, we might have an additional lab (lab 13) if time permits.

Homework assignments: There will be 7-8 homework assignments given throughout the semester, which will usually be due on Thursday nights by 11:59:59 pm. Students will have at least five days to work on each assignment. The schedule is posted on the course Website. Submission instructions will be provided online as well.

Tests: 2-3 tests will be given during the semester on the dates shown in the online course schedule. In addition, there will be a final exam during the scheduled finals period. The tests during the semester will combine to count for 30% of the grade. The cumulative final exam is worth 20%.

Weighted Test Average and The Final Grade: Importantly, students must have a weighted test average, including the final exam, of at least 50% to pass the course. This is a firm rule and will be determined by the test average rounded to the nearest integer. Exceptions will not be made.

Attendance Policy

Class attendance is strongly encouraged, but not required. Students must attend their assigned lab sections unless prior arrangements are made with the lab TAs.

Lecture notes will be posted on the course Web site the day before each lecture. Students are strongly encouraged to study these carefully, including the examples that are provided. Our experience in teaching this class has been that many questions students ask are already answered in the notes.

Other Course Policies

Submitty: We will be using Submitmy for announcements, online discussions, and posting of both homework assignments and lab handouts. You will be automatically added to Submitmy on enrolling for the course.

You can log in to Submitmy using your rpi.edu email address. You should be checking this site at least once a day for announcements and discussion, and much more often when you are working on assignments and prepping for exams. Better yet, sign up to receive email alerts of postings (this Submitmy feature is experimental).

What to post on Submitmy discussion forum? What not to post? Use common sense. Please **do** post questions about lectures, labs, homework assignments, and tests. Choose Submitmy instead of emailing your instructor or your TA, and make sure that other students can see your questions. (In other words, don't use Submitmy for a private chat with the instructors.) Your posting can be anonymous to other students, but it will not be anonymous to the instructors. Before you post, check what has already been posted so that you don't repeat a question. Do not post a section of code you have written for a lab or a homework problem, but instead post questions about how to find and fix an error or about what an error message might mean. Help with debugging your code is best done one-on-one during office hours, lab, and extra help sessions.

Lab Sections: Each lab will be led by a graduate student TA, assisted by one or more undergraduate mentors. Assignment of TAs to lab sections will be announced via the course Website. Get to know your TA, your mentors, and other students in your lab section. Your TA will get to know you. Your TA is your first

point of contact for this course. You may attend the office hours of the instructors or of any TA, not just the one supervising your lab. Office hours will be posted on the course Website.

Lab Late Policy: You must complete labs during the lab time to get full credit. Unfinished components of labs may be finished up to a week late for half the credit. The one exception is for the final checkpoint of each lab. We will offer full credit for the final checkpoint so long as it is finished within a week of class provided that **the student arrives at lab on time and works diligently for the entire lab period.**

Grade Appeals: All grade appeals on labs and homework assignments must be submitted within a week of receiving a grade using the "Regrade Request" feature of Submittity. No grade appeals will be accepted by e-mail or in person. Students will be able to see all of their grades online via Submittity.

Homework Late Policy: Homework assignments must be submitted electronically by the deadline, as measured by our computers. Assignments that are a minute late are considered a day late! Each student will be given a total of **3 days (whole or partial) of grace** for late homework assignments for the entire semester. These grace days should be used carefully, and **no more than two** may be used for any one assignment. Once the late days have been exhausted, late assignments **will not be accepted** without a written excuse from the Student Experience office.

As an example, if student X submits his/her 1st assignment 36 hours late, X will have used two late days and have only 1 day left. If X then submits another assignment 24 hours and 10 minutes late, it will not be graded, and will receive a grade of 0.

Students should use their late days **carefully**, saving them for the latter part of the semester or, better yet, not using them at all. Save them for crashed computers, crashed disks, failed virtual machines, and late semester crunches of having too many assignments due at once.

If there are extenuating circumstances, such as a personal or medical emergency, that cause your homework to be late, please obtain an excuse from the Student Experience office. Crashed computers, failed disk drives, and overwritten files are not considered valid excuses for late homework.

Couse related announcements: We make all important announcements on the Submittity discussion forum in a timely manner. It is the student's responsibility to check that on a daily basis.

Academic Integrity

Student-teacher relationships are built on trust. For example, students must trust that teachers have made appropriate decisions about the structure and content of the courses they teach, and teachers must trust that the assignments that students turn in are their own. Acts that violate this trust undermine the educational process. The Rensselaer Handbook of Student Rights and Responsibilities defines various forms of Academic Dishonesty and you should make yourself familiar with these.

In this class, all assignments that are turned in for a grade must represent the student's own work.

You are encouraged to collaborate in labs as long as you write the final solution to the lab on your own.

Homework submissions should be your own work, but you are allowed to discuss the goals of an assignment and the overall design, testing and debugging of the solution. Your code should be your own. Program submissions, especially longer ones, that are too similar to have been written independently will be flagged electronically (comparing all submissions across all sections and potentially across semesters), and students will be asked to explain the cause of the similarity.

Copying, communicating or using disallowed materials during an exam is cheating. Students caught cheating on an exam will receive an F in the course and will be reported to the Dean of Students office.

Students who do not submit their own work will receive a 0 on the assignment and will likely receive an additional overall grade penalty, depending on the severity of the infraction. Typical penalties are 5 to 10 percentage points subtracted from the semester average. Students caught a second time will receive an F in the course. All infractions will be reported to the Dean of Students office.

If you have any question concerning this policy before submitting an assignment, please ask for clarification.

Other Course-Specific Information

Ms. Shianne Hulbert is the Instructional Support Coordinator for CS1. She will coordinate many of the exception requests.

All questions that require attention from the instructors or the course coordinator must be sent to: cs1instructors@cs.lists.rpi.edu. This alias goes to all instructors: Uzma Mushtaque and Shianne Hulbert. Please include your name and section number in all your emails.

Excuses and exceptions: If you are going to miss an assignment or an exam, you must notify your TA and instructor as soon as you know this is happening. You may be allowed to make up a missed assignment or exam only if you get an official excuse from the Office of Student Experience. Remember crashed computers or forgetting the day of an exam are not valid reasons for an excuse!
